柔韧训练系列
Flexibility training series

利用自身的体重，使得肢体保持一定的伸展位置，依靠器材的辅助，依靠收缩肌肉的力量，缓慢的、放松性的拉伸是增加动作的柔韧性和收缩肌肉的力量。而且还可以起到降低神经和肌肉兴奋性的作用。

Use your own weight to keep your limbs in a certain stretch position, rely on the assistance of equipment, and rely on the strength of contraction muscles. Slow and relaxed stretching is to increase the flexibility of movements and the strength of contraction muscles.

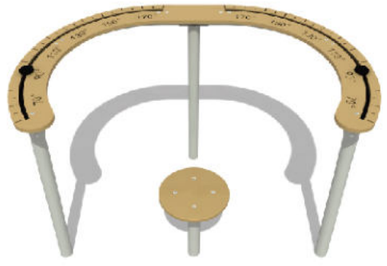

And it can also reduce nerve and muscle excitability.

CORROSION RESISTANT

塑木有抗腐蚀、抗晒、抗氧化的作用。健身器材的立柱外加了一层塑木，里面的塑钢上仍有一层油漆。多重工艺的处理加之多材质组合的新型户外健身器材的使用寿命延长不少。

Plastic wood has anti-corrosion, anti-sun and anti-oxidation effects. A layer of plastic wood is added to the column of the fitness equipment, and there is still a layer of paint on the plastic steel inside. The multi-process treatment and the combination of multiple material combinations extend the service life of new outdoor fitness equipment.
